Question 1:

```
USE incassdb;

DELIMITER //

CREATE PROCEDURE AddEmployee(
    in p_EmpID int,
    in p_Name varchar(100),
    in p_Salary int,
    in p_DepartmentID int
)
BEGIN
    INSERT INTO Employees (EmpID, Name, Salary, DepartmentID)
    VALUES (p_EmpID, p_Name, p_Salary, p_DepartmentID);
END //

DELIMITER ;

CREATE PROCEDURE ViewAllEmployees()
BEGIN
    SELECT * FROM employees;
END //

DELIMITER ;

CREATE PROCEDURE ViewSpecificEmployee(
    in p_EmpID int,
    in p_Name varchar(100),
    in p_DepartmentID int
)
BEGIN
    SELECT EmpID, Name, Salary, DepartmentID
    FROM employees
    WHERE
        (p_EmpID is NULL or EmpID = p_EmpID)
        and (p_Name is NULL or Name = p_Name)
        and (p_DepartmentID is NULL or DepartmentID = p_DepartmentID);
END //

DELIMITER ;
```

```
# Add employee to database
def add_employee(id, name, salary, department_id):
    try:
        conn = connect_to_db()
        cursor = conn.cursor()
        query = "CALL AddEmployee(%s, %s, %s, %s)"
        cursor.execute(query, (id, name, salary, department_id))
        conn.commit()
        cursor.close()
        conn.close()
        messagebox.showinfo("Success", "Employee added successfully!")
    except mysql.connector.Error as e:
        messagebox.showerror("Database Error", f"Error: {e}")

# View all employees from the database
def view_all_employees():
    try:
        conn = connect_to_db()
        cursor = conn.cursor()
        query = "CALL ViewAllEmployees()"
        cursor.execute(query)
        employees = cursor.fetchall()
        display_employees(employees)
        cursor.close()
        conn.close()
    except mysql.connector.Error as e:
        messagebox.showerror("Database Error", f"Error: {e}")

# View specific employee based on criteria
def view_specific_employee(emp_id, name, dept_id):
    try:
        conn = connect_to_db()
        cursor = conn.cursor()
        query = "CALL ViewSpecificEmployee(%s, %s, %s)"
        params = []
        cursor.execute(query, (
            emp_id if emp_id else None,
            name if name else None,
            dept_id if dept_id else None
        ))
        employees = cursor.fetchall()
        display_employees(employees)
        cursor.close()
        conn.close()
    except mysql.connector.Error as e:
        messagebox.showerror("Database Error", f"Error: {e}")
```

Question 2:

Employee Manager

Employee ID

Name

Department ID

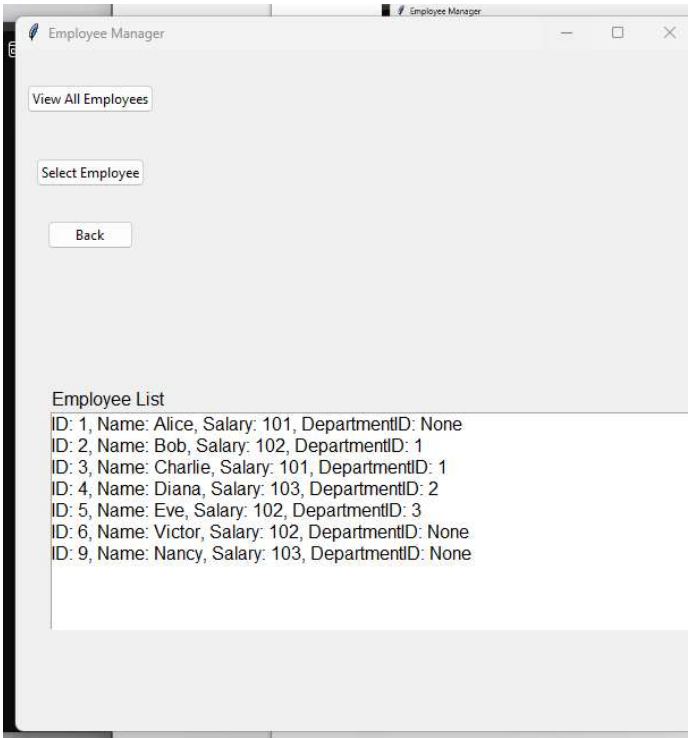

Search Employee

Back

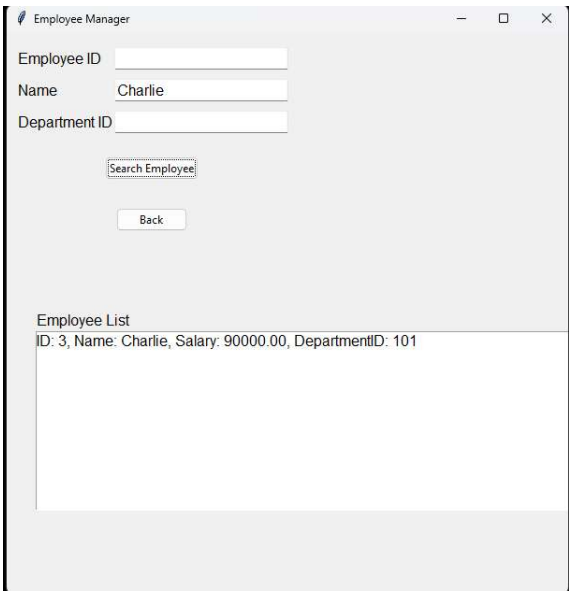

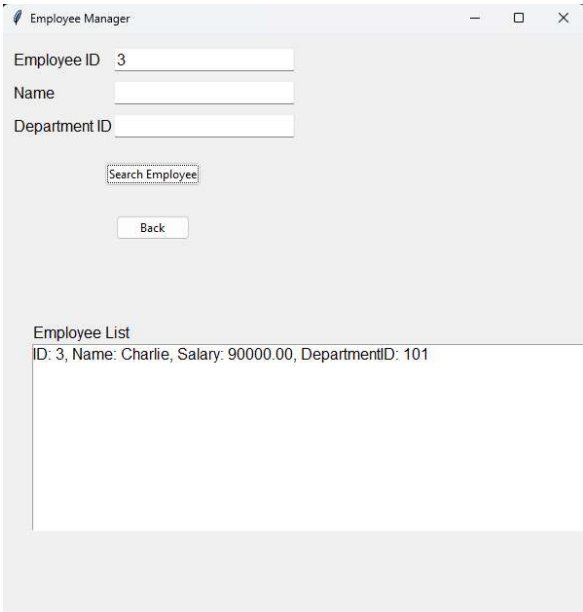

Employee List

ID: 1, Name: Alice, Salary: 100000.00, DepartmentID: 101
ID: 2, Name: Bob, Salary: 85000.00, DepartmentID: 102
ID: 3, Name: Charlie, Salary: 90000.00, DepartmentID: 101
ID: 4, Name: Diana, Salary: 75000.00, DepartmentID: 103
ID: 5, Name: Eve, Salary: 78000.00, DepartmentID: 102
ID: 6, Name: Victor, Salary: 88000.00, DepartmentID: 102
ID: 9, Name: Nancy, Salary: 78000.00, DepartmentID: 103

Question 3:
3a. Victor and Nancy can be seen from screenshot above
3b.

3c.
