

Running this snippet

```
SELECT User, Host, Password,
```

```
FROM mysql.user;
```

didn't work for me. Seeing as the intent was to show that I had it installed and logged in, I used "authentication_string", because mySQL prevents us from viewing "password".

```
mysql> SELECT User, Host, authentication_string
-> FROM mysql.user;
```

User	Host	authentication_string
mysql.infoschema	localhost	\$A\$005\$THISISACOMBINATIONOF
mysql.session	localhost	\$A\$005\$THISISACOMBINATIONOF
mysql.sys	localhost	\$A\$005\$THISISACOMBINATIONOF
root	localhost	\$A\$005\$gh']eZ&oFGcc_%?xsY1Q

```
